

11 ways to protect your information on mobile devices

As we handle more of our personal, school, and work-related business on mobile devices, cyber criminals are working harder to trick people into providing sensitive information and downloading malicious apps.

Here are 11 ways to protect your information:

1. Enable Multi-Factor Authentication (MFA) on all accounts

2. Use passcodes, strong passwords, and biometric authentication

3. Enable your screen auto-lock feature

4. Guard your screen in public places

5. Use trusted Wi-Fi networks

6. Protect mobile hot spots with strong passwords

7. Only download apps from trusted sources

8. Update mobile device software and keep applications up to date

9. Be on the lookout for phishing scams in your inbox

10. Evaluate embedded links before clicking

11. Educate yourself on how devices share data online
