Ellucian Quercus

Improve efficiency and manage compliance with a modern student information system

### A flexible solution created just for education

Institutional performance hinges on clear, direct connections between every department and constituent within physical and virtual reach of your institution. Ellucian Quercus is a cloud-based student information system delivered to staff and students through browsers or mobile devices. Its modern architecture enables you to adapt seamlessly as functional and technical needs change—and flexibility and extensibility are critical to meeting constituent expectations and to competing globally. Quercus enables a continuous lifecycle of your digital campus, integrating with non-Ellucian solutions as well. Quercus offers your institution a range of key benefits, including:

- Improves student services and maximises the student experience

- Simplifies business processes

- Drives efficiency and effectiveness

- A comprehensive and integrated solution

"Users across all departments can access the data they need. Through the dashboard, they can see the status of student applicants in real-time."

JANE JEHANNO
Project Manager,
Royal College of Surgeons

Trouble-free implementation and maintenance

Ellucian manages Quercus in the cloud, so you don't have to worry about IT maintenance or headaches. Ellucian handles all monitoring, performance tuning, support, and managing the delivery and implementation of any solution upgrades. Our implementation approach is resourced with highly trained and experienced Ellucian staff or our certified partners. With our rapid implementation process, you can "go live" within weeks.

Packed with features to enhance the educational experience

Quercus includes a suite of software modules that allow institutions to manage student and course records. A module provides a set of functions relating to a specific business area or process. There are two types of modules: Core modules, which must be installed in order for Quercus to function, and Lifecycle modules, which can be included or excluded according to the needs of the institution.

Quercus Core allows you to maintain student personal information, academic performance and details of your institution's academic programmes. This is the area covered by a traditional "student management" solution.

Quercus allows other enterprise systems to work with its database and for Quercus, in turn, to pull information from these systems. This enables automated processes that once required the use of multiple systems. With Quercus, you can also monitor the state of your key performance indicators, extract business intelligence, and meet the majority of your reporting and regulatory obligations.

Designed to connect your constituents

We know that institutions are committed to providing an efficient student-centred and increasingly online student administration service. That's why Quercus is specifically geared to enhance the educational experience for nearly everyone on your campus.

The right tool for a modern campus

The Quercus platform helps you to create an integrated digital campus that makes it easier for constituents to communicate, to find the information that they need, and to accomplish any task—from engaging prospects to cultivating alumni relationships.

- **Consistency** – providing a common, contemporary user experience across all applications.

- **Empowerment** – connecting constituents across departments and enabling student success.

- **Simplicity** – implement quickly and easily by controlling which components are deployed and when.
